## Fabric Ducting and Diffusers

**Flexible fresh air supply and exhaust systems - an aesthetic solution without the draughty feeling!**

Textile ducts in air conditioning (air heating, cooling and ventilation) **offer innovative fresh air supply** to the room and allow new approaches to interior design. They are an excellent alternative to traditional sheet metal ducts, combining both functionality and aesthetics, while at the same time significantly reducing the investment in ventilation ducts.

With Prihoda's textile ducts, we ensure a uniform air intake, which gives a ventilation effect without the feeling of draughts. The air can be blown in a variety of ways to achieve different types of air intake, from diffuse, low velocity, to directional, high velocity and range.

Easy to install and made to measure, they are suitable for all types of rooms:

- production halls,
- restaurants,
- sports halls,
- offices,
- trade fairs, etc.

## FLEXIBLE APPEARANCE AND AIR INTAKE

Different air inlet and outlet systems are available, adaptable to all dimensions and lengths. Designed and are designed and manufactured for each individual project. The systems can be simply straight or more complex, with different design elements such as adjustable elbows, Y, T, X or other reducers.

## REASONS FOR FABRIC

- ✓ Quick and easy solutions save up to 70%
- ✓ The intelligent answer to conventional galvanised sheet metal ducts and blowing elements
- ✓ Wide range of shapes and colours
- ✓ Washable, antibacterial and suitable for use in clean rooms
- ✓ High fire resistance with certificates
- ✓ Technical support & advice
