Inpro d.o.o. recognises the urgency of the global transition towards sustainability and decarbonisation. With innovative solutions and a commitment to social and environmental responsibility, we have become a player in driving the green

transition and decarbonisation movement. The Green Transition involves a shift from traditional fossil fuel-based energy systems to cleaner and more sustainable alternatives. This includes the use of renewable energy sources such as solar, wind and hydropower, and the adoption of energy-efficient technologies and practices.

Decarbonisation focuses on reducing carbon emissions and ending dependence on carbon-intensive industries. This includes a shift to low or zero carbon activities in sectors such as transport, manufacturing and energy production.

#### WHY IS THIS SO IMPORTANT?

It's no secret that our planet is facing pressing environmental challenges and we need to act to ensure a sustainable and enjoyable future for future generations. The green transition and decarbonisation are key elements of this mission.

By switching to clean energy sources, reducing carbon emissions and promoting sustainable practices, we can mitigate the negative impacts of climate change and create a healthier planet for all. The importance of this movement is invaluable, and companies like us have a leading role to play.

**At Inpro d.o.o., sustainable development is not just a phrase, but a core value. The company envisions a future in which sustainable practices become a constant and the environment is preserved for future generations. We are aware that we can play an important role in promoting the green transition and decarbonisation movement.**

#### COOPERATION AND PARTNERSHIPS FOR A GREEN TRANSITION AND DECARBONISATION

We believe that collaboration with world-renowned companies is key to sustainable solutions. We have established strategic partnerships with industry leaders who share our vision and commitment to decarbonisation. These partnerships enable us to develop and implement innovative technologies and practices that reduce carbon emissions and promote a greener way of doing business by pooling our resources, knowledge and experience

A sustainable, low-carbon business model for providing cooling and heating.

They develop, design and manufacture hydrogen solutions.

Specialised in the design and manufacture of HYDRONIC air conditioning and air treatment systems.

A world-renowned company in the field of hot water absorption chillers.

**Rank.**<sup>®</sup> Rank technology is based on Organic Rankine Cycle (ORC) technology. It enables the combined production of electricity and useful heat using a low-temperature heat source, with associated economic and environmental benefits.

We envision a future where carbon emissions are minimised and renewables play a dominant role in meeting the world's energy needs. We want to contribute to a carbon-neutral society where sustainable practices are the norm.

**Together, we can take meaningful action and work together for a brighter and cleaner future.**
